

## Skid and Trailer mounted Burn Units Shipping Dimensions

### Trailer Mounted Unit-

Weight- 4200 pounds

Length- 233 inches (19'6")

Height- 82 inches (6'10"). (Bolt-on stack is stored inside for shipment)

Width- 81 inches (6'9")

### Skid Mounted Unit-

Weight- 6100 pounds

Length - 274 inches with bolt-on tongue removed. (Add 36" if tongue is on)

Height- 102 inches. (Bolt-on stack is stored inside for shipment)

Width- 77 inches.

\*Modified Unit shortened for saving money on barge transport: The front loading has been cut and folded and stacked on deck to save sq footage during shipping.

Dimensions are as follows:

Length -17 ft 4 inches

Height- 8 ft 6 inches

Width- 6ft 5 inches

Both Units can be easily transported on the highway using a 3/4 ton pickup truck that has a two inch ball hitch. Transportation to remote communities is by road, ferry, barge, and airplane.

The smaller Trailer Mounted Unit has been flown in by Evertts Air Cargo. They remove the 'Burn Box' from the trailer then load them both on the plane. On the receiving end there needs to be a loader or large forklift available to replace the 'Burn Box' back onto the trailer.

The larger Skid Mounted Unit has not been delivered by plane yet, so we do not have that experience. The 'Burn Box' barrel can be removed and it measures 77 inches wide, and 73 inches tall and 12 foot long. The Skid portion without the tongue and dolly measures 242 inches long and 77 inches wide and 49 inches tall. The dolly measures 100 inches wide and 27 inches tall and 60 inches long.

If your shipper still could not get the largest item (the skid through the door) on the plane then I could modify the skid platform by making it into two pieces. These arrangements would have to be worked out well in advance when ordered.
